
Recap

recap

1. State the rules to name the identifier
2. State syntax to declare variable
3. State the syntax to declare the constant
4. State example of special character

Practice

- Determine the following identifier is valid or not

A. IDno
B. 25DDT18F
C. _price
D. Discount_price
E. Date of birth
F. Total_M@rks
G. Radius circle

Data type identifier

Determine the following variable is valid or not:

1. int year VALID
2. int account balance NOT VALID
3. float area VALID
4. char jantina VALID

Practice

State TRUE or FALSE for following statement:

1) Identifier address is equal to ADDRESS FALSE
2) During naming the identifier, we can put number at front of identifier. FALSE
3) Special symbol cannot be using during naming the identifier TRUE
4) We can use reserve word as identifier FALSE
5) Value of constant is changes FALSE
6) Value of variable is fix FALSE
7) Variables can store numbers and letters. TRUE

PRACTICE

Determine the data type of following:

1. 567 -int
2. 78.6 -float
3. “PMJ” - non numeric -string
4. ‘P’ – non numeric -char
5. 7377.7755 – numeric - double
6. ‘$’ – non numeric
7. "Hello world!“ – non numeric - string

Match between data type and correct description

Data Type
long
Char
Double
Float
String
int
short

Description
To store small (short) integer number
To store single character
To store collection of characters
To store decimal number with double precision
To store decimal number with single precision
To store large (long) integer number
To store integer value

Determine correct data type to complete the variable.

1. ___integers___ Mynumber = 7377;

2. double float mydoubenum = 89.965;

3. ___char___ myLetter = ‘A’;

4. ___string___ myText = “Hello PMJ”;

5. ___short___ y = 10;
